

**PLEASE REVIEW INSTRUCTIONS BEFORE WE BEGIN  
THE DISASTER TRIAGE WEBINAR**

**Joining Instructions**

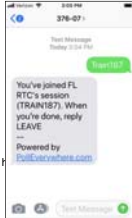

- Attendee phones have been placed on mute
- **Open Participants and Chat Panel** located at top of your computer screen
- Right Click on panels to move for better viewing of presentation
- Webinar will be recorded for future viewing

**Attendance**

- If you do not see your **full name** listed under "Attendees", provide your name to the Host using the Chat Function
- If you are hosting a group of participants in a room, fax/email sign-in sheet to [Eileen\\_Spezio@urmc.Rochester.edu](mailto:Eileen_Spezio@urmc.Rochester.edu) or (585) 756-5098 by COB today

**Communication**

- Check the **audio** and instructions from the Host.
- Communicate with the host, panel and/or presenter using the Hand or Chat
  - Hand – request to be unmuted for a verbal question or comment
- Will be available to participants that registered for the course on the NYS Learning Management System [www.nyyearsph.com](http://www.nyyearsph.com)

GOAL:

**UTILITARIAN APPROACH**  
GREATEST GOOD FOR THE  
GREATEST NUMBER

### Important Considerations during an MCI Response

- Supply vs. Demand
- Resource Allocation
- Coordination
- Medical Management
- Ethics

## What Could Be an MCI For You?

Mass Gathering Event

Hazmat Incident

Biological Incident

Loss of Power

Severe Weather

Blizzard

Tornado

Hurricane

Flood

---

---

---

---

---

---

---

---

## CASE STUDIES FROM ACUTAL EVENTS

**Super Tornado Outbreak**

Asiana Airline Crash

**Boston Marathon Bombing**

Orlando Shooting

**Las Vegas Shooting**

Thousand Oaks Shooting

Schoharie Limousine Crash

---

---

---

---

---

---

---

---

## Chattanooga, TN

<https://www.noaa.gov/media/2011-tornado-super-outbreak>

---

---

---

---

---

---

---

---

## The Scene

---

On April 27, 2011, an EF4 (enhanced Fujita scale) tornado struck a 48-mile path across northwest Georgia and southeast Tennessee. Traumatic injuries sustained during this tornado and others in one of the largest tornado outbreaks in history presented to the regional Level I trauma center, Erlanger Health System, in Chattanooga, TN.

## Where Did They Go?

---

### **169 adults and children**

treated in Erlanger Health System's 5 area Emergency Departments

**94** treated at Level 1 Trauma Center

**20** at Erlanger Bledsoe

**6** at Erlanger North

## Boston Marathon Bombing May 15, 2013

## The Scene

Rescue workers and medical personnel were on hand to assist runners and bystanders rushed to help the wounded in the immediate aftermath

:KHUH 'LG 7KH\ \*R "

Between 625 and 800 casualties were treated at nearly every hospital and treatment facility in the Washoe Valley of Nevada and beyond

% Desert Springs Hospital (community hospital closest to the venue) received 55 casualties. Hospital staff had little or no experience with GSWs

% University Medical Center (trauma hospital, six miles from venue) received 60 casualties initially, then approx. 25 by transfer later

% Sunrise Hospital (Level 2 trauma center 4.8 miles from venue) received 184 casualties (many more unregistered)

% Most victims self-transported or arrived by private vehicle, cab, Uber, etc. Less than 25% arrived by EMS

## MCI MANAGEMENT

## Triage

French verb *trier*, meaning to separate, sift or select

French Battlefield Term  
dating back to WWI  
Wounded were divided into three categories

--	--	--

## Disaster Triage

1<sup>st</sup> contact (at scene or hospital)  
Assign triage category

ongoing process that takes place  
after the patient has been moved to a  
**treatment/holding area** awaiting  
transport.

## Primary Triage

## Which system is utilized in NYS?

Depends on the local medical director

NYS DOH BEMS does endorse or recommend a particular system

In 2005 was provide grant monies to purchase and distribute SMART Tag Triage System to ambulance services across NYS

START is currently the most commonly used methodology in NYS

## Disaster Triage Systems

**The "Greens"**

- † Once they walk toward you – designate a place for them to go
- † Someone needs to tag them green
- † Someone needs to stay with them & keep them informed

---

---

---

---

---

---

---

**"START" – PRIMARY TRIAGE**  
**RPM**

---

Non-Ambulatory Casualties Require Additional Assessment

expiratory effort  
ulses/perfusion  
ental status

## Primary Triage

### **START – Perfusion/Pulse**

#### Circulatory Check...

Capillary Refill > 2 seconds = tag **RED**

If unable to obtain a capillary refill, check the radial pulse.  
If radial pulse is absent, and tag **RED**

## BLEEDING CONTROL

STOP THE BLEED

tourniquet or  
wound packing

<https://www.stopthebleed.org/>

Adequate Circulation  
Capillary Refill < 2 Seconds  
Radial pulse present

Primary Triage

**START – Mental Status**

A

B

C

Mental  
Status

**START – Mental Status**

**JumpSTART**  
**Pediatric Modifications**  
**RPMs - Respiratory effort**

No Respirations – **OPEN AIRWAY** **RED**  
If the patient starts breathing tag **RED**  
If apneic and no pulse tag **BLACK**  
If apneic with pulse try **5 rescue breaths**  
If still apneic tag **BLACK**  
If starts breathing tag **RED**

Respirations < 15 or > 45 tag **RED**

Adequate Respirations 15-45 **go to next step**

↓

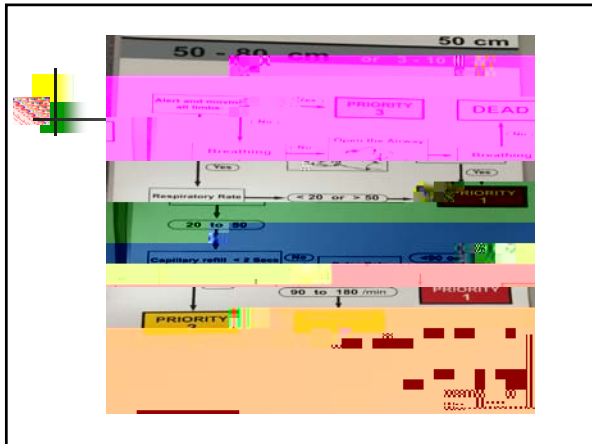

**JumpSTART**  
**Pediatric Modifications**  
**RPMs - Pulse**

No distal pulse – **tag RED**  
Pulse present **go to next step**

↓

**Mental Status**

---

---

---

---

---

---

---

---

### QUICK REVIEW...

- Ambulatory/Walk = GREEN
- Non-Ambulatory = NEXT STEP (Airway)
- YES breathing = NEXT STEP (Respiratory)
- NO Breathing = Open Airway
- Starts to breath = RED
- No breathing = BLACK
- ABNORMAL (> 30 or < 10) = RED
- NORMAL (10-30) = NEXT STEP (Circulation)
- Capillary Refill OR Radial Pulse
- ABNORMAL/ABSENT (CR > 2 OR No Pulse) = RED
- Control Bleeding
- Normal (CR < 2 OR Pulse Present) = NEXT STEP (Mental Status)
- YES follows simple command = YELLOW
- NO can't follow simple command = RED

---

---

---

---

---

---

---

---

## Disaster Triage Systems

- MASS - "Move, Assess, Sort, Send"
- ESI - "Emergency Severity Index"
- SALT -
- START/JumpSTART

---

---

---

---

---

---

---

---

## Development of SALT

Part of CDC sponsored project  
Develop national standard for mass casualty triage  
Sort - Assess - Life Saving Interventions - Treatment/Transport  
Based upon best evidence  
Concept endorsed by: ACEP, ACS-COT, ATS, NAEMSP, NDLSEC, STIPDA

64

---

---

---

---

---

---

---

---

## Federal Recommendations Released July 2013

---

---

---

---

---

---

---

---

## Model Uniform Core Criteria

### BACKGROUND

Workgroup established to review science and develop list of recommended criteria for Disaster Triage Systems

### RESULT

Identifies 24 criteria - essential elements - for an MCI triage system  
Provides a standard for triage systems to increase interoperability  
Provides guidelines for revision of existing MCI triage systems

---

---

---

---

---

---

---

---

2018

NHTSA released an addendum  
[https://www.ems.gov/pdf/education/National-EMS-Education-Standards-and-Instructional-Guidelines/MUCC\\_Addendum\\_EMT.pdf](https://www.ems.gov/pdf/education/National-EMS-Education-Standards-and-Instructional-Guidelines/MUCC_Addendum_EMT.pdf)

---

---

---

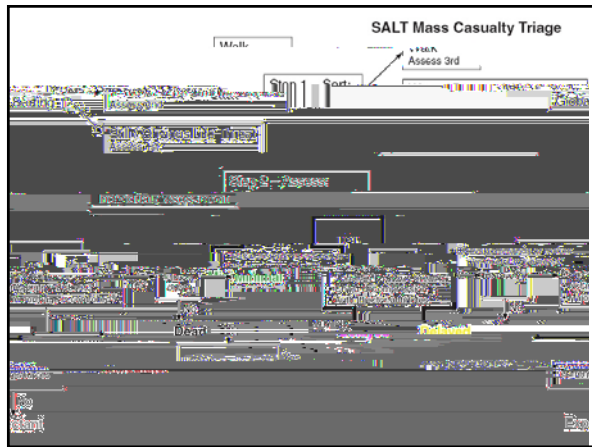

---

---

---

---

---

---

---

---

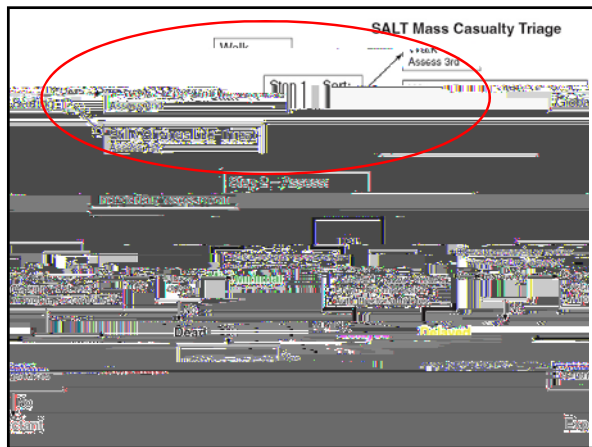

---

---

---

---

---

---

---

---

---

---

---

---

---

## SALT - Action 1

Everyone who can hear me please move to [designated area] and we will help you  
Use loud speaker if available

Group ambulatory patients using voice commands

Those who follow this command - last priority for individual assessment

70

---

---

---

---

---

---

---

---

## SALT - Action 2

If you need help, wave your arm or move your leg and we will be there to help you in a few minutes

Identify non-ambulatory patients who can follow commands or make purposeful movements

Those who follow this command - second priority for individual assessment

71

---

---

---

---

---

---

---

---

## SALT - Result

Casualties prioritized for individual assessment

Priority 1: Still, and those with obvious life threat

Priority 2: Waving/purposeful movements

Priority 3: Walking

72

---

---

---

---

---

---

---

---

## Step 2: Individual Assessment Lifesaving Interventions

SALT Mass Casualty Triage

---

## DEAD

Casualties with complete absence of life  
Not breathing after basic airway-opening maneuvers, including two rescue breaths if a child  
Attempt basic life-sustaining efforts only if sufficient personnel available  
It is important to *NOT* move dead casualties, unless the remains are blocking access to live casualties

Example

Casualty gurgles but can't maintain an open airway and is not breathing

Unresponsive

DEAD – PRIORITY 5

Non-ambulatory casualty  
wip\*

## Secondary Triage

**GLASGOW COMA SCORE**

**Eye Opening :**

- Spontaneously
- To speech
- To pain
- None

**VERBAL RESPONSE :**

- Oriented
- Confused
- Words but no sense
- Motor only
- None

**MOTOR RESPONSE :**

- Obeys commands
- Localizes pain
- Flexion
- Extension
- None

**GLASGOW COMA SCALE TOTAL :**

**Total Glasgow Coma Scale**

15	15
14	14
13	13
12	12
11	11
10	10
9	9
8	8
7	7
6	6
5	5
4	4
3	3
2	2
1	1

**Respiratory Rate**

12-20	12-20
10-11	10-11
6-9	6-9
0-5	0-5
0	0

**Systolic BP**

130-139	130-139
90-129	90-129
60-89	60-89
0-59	0-59
0	0

**12 = PRIORITY 3**  
**11 = PRIORITY 2**  
**10 or less = PRIORITY 1**

**TOTAL :**

---

---

---

---

---

---

---

---

Efforts to identify and track casualties should begin at the scene

Tracking officer must ensure everyone accounted for

Systems can range from electronic system, to triage tag, to simply recording information on a piece of tape

Allow for more information to be added to system as it becomes available

---

---

---

---

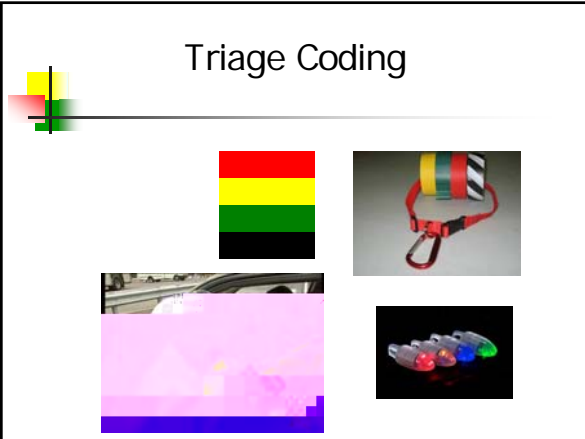

---

---

---

---

## Triage Coding

---

---

---

---

---

---

---

---

## Triage Tags

Types of triage tags  
 Several on the market  
**SMART Tag**  
**METTAG**  
**SALT Method METTAG**

**Advantages**  
 Alerts providers to priorities  
 Prevents re-triage  
 Tracking system

---

---

---

---

---

---

---

---

60\$57 7\$\*

<https://youtu.be/YCmCWzed0uA>

---

---

---

---

---

---

---

---

## SMART TRIAGE TAG

- Innovative folded design allows for simple re-triaging
- Highly visible, with Priority 1 lightstick
- Highly durable, waterproof and tear resistant material
- Space for structured recording of interventions (time allowing)
- Unique barcode for integration with tracking software

---

---

---

---

---

---

---

---

It's a **RED**  
that is **VERY Critical**

---

---

---

---

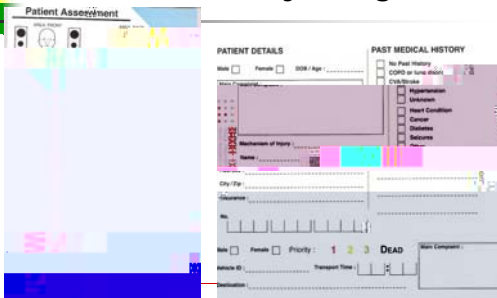

---

---

---

---

## Documentation & Secondary Triage

---

---

---

---

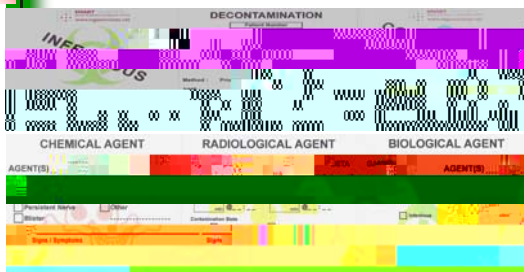

---

---

---

---

## SMART WMD TAG

<https://youtu.be/EpK7FSukPOQ>

---

---

---

---

---

---

---

---

## SMART Tag Triage System

<https://youtu.be/Ttl-gsMeDcM>

---

---

---

---

---

---

---

---

## SMART Triage Pack Contents

- Dynamic Tags (20)
- Dead Tags (10)
- Pencils
- Cylume Sticks
- Casualty Count Card/Protocol
- SMART Pediatric Tape

---

---

---

---

---

---

---

---

## Casualty Count Card/Protocol

---

---

---

---

---

---

---

---

## The Treatment Area ON SCENE

Casualties should be separated as tagged

## Dead/Expectant Special Considerations

Establish an area away from other casualties  
It should be a secure area away from on-lookers, media, etc.  
Accessible for you and coroner staff

## Casualty Transport and Evacuation

Casualties must be prioritized for treatment as well as transport to definitive care.

Regions may have different plans related to notification, destination and transport

Avoid overwhelming the closest hospitals:

1. Transport priority patients to local hospitals
2. Transport stable patients to more distant hospitals or treatment facilities stood-up for the incident
3. Treat minor injuries and release from scene

## Casualty Transport How do victims arrive?

Ambulance

Air Transport

Medical Emergency Response Vehicle  
(MERV)

Non-Emergency Vehicles (Bus)

Self Transport (private vehicles, UBER)

## Casualty Transport Hospital Considerations

### Estimating Total Expected Casualties Calculations

~ 50% of acute casualties may arrive at the closest medical facilities within 60 min

50-80% may arrive within 90 min

Most arrive within 1-4 hours

## Total Casualty Numbers Hospital Planning Assumptions

## The Treatment Area Hospital

Sample/Suggested Expanded Treatment Area Location

Triage	Ambulance Bay	
Immediate Treatment (Red Area)	Emergency Dept	
Delayed Treatment (Yellow Area)	Ambulatory Surgery ED Fast Track	
Minor Treatment (Green Area)	Clinics, Outpatient Areas	
DOA or Terminal (Black Area)	Morgue	

# Forward Triage Concept

Mass casualty event occurs when number of victims overwhelms resources

Change perspective to greatest good for greatest number

Initial goal of mass casualty triage to sort and assess casualties to identify those with life-threatening injuries and initiate lifesaving treatment and then evacuate all casualties

Triage Process is Continuous and Dynamic

---

---

---

---

---

---

---

---

## Disaster Triage Practical Application

---

---

---

---

---

---

---

---

## PollEverywhere Text TRAIN187 To 37607

---

---

---

---

---

---

---

---

## Scenario

---

An improvised explosive device is detonated at a large outdoor sporting event. At least 50 people are confirmed injured.

EMS arrives on scene

## Casualty # 1

## Casualty # 1

RR 26

No obvious s

How would you triage Casualty #1?

6

Immediate/Red Urgent/Yellow Delayed/Green Expectant Dead/Black

“

### Casualty # 2

RR 36 - but no obvious signs of distress  
Pulse felt below the injury to the arm  
Does not understand simple commands  
Significant bleeding from the wound

How would you triage Casualty #2?

- Immediate/Red
- Urgent/Yellow
- Delayed/Green
- Expectant
- Dead/Black

### Casualty # 3

### Casualty # 3

RR 26 - no obvious signs of distress  
Peripheral pulse present  
Following all

How would you triage Casualty #3?

- Immediate/Red
- Urgent/Yellow
- Delayed/Green

---

---

---

---

---

---

---

---

### Casualty # 4

Does not appear to be breathing  
No pulse  
Can't follow instructions  
No bleeding

According to START/SALT - If a casualty is not breathing you would...

Don't waste time with tagging - go to next casualty

Manually open airway, tag Red if he starts to breathe

---

---

---

---

---

---

---

---

### Casualty # 4

Remains Apneic  
No pulse  
Can't follow instructions  
No bleeding

How to tag a casualty

Immediate/Red A  
Urgent/Yellow B  
Delayed/Green C  
Expectant D  
Dead/Black E

---

---

---

---

---

---

---

---

### Casualty # 5

---

---

---

---

---

---

---

---

### Casualty # 5

- RR < 10 no obvious signs of distress
- Peripheral pulse present
- No purposeful movement
- No visible bleeding

---

---

---

---

---

---

---

---

### Casualty # 6

---

---

---

---

---

---

---

---

# Casualty # 6

Delayed/Green

Expectant

Dead/Black

# Casualty # 8

# Casualty # 8

How would you triage Casualty #8?

Immediate/Red

Urgent/Yellow

Delay

# Questions???

---

---

---

---

---

---

---

---

## Remember the goal of training

- Increase familiarity/proficiency of a triage methodolog (START or SALT)
- Increase familiarity with the SMART Tag Triage System
- Train with a standardized methodology and system
- Grow your organization's triage & mass casualty response competency

---

---

---

---

---

---

---

---
